

HAU HUYNH

SOFTWARE ENGINEER INTERN

☎ +84 377729239 | ✉ haucoderfullstack05@gmail.com | ⓘ <https://www.codeser.io.vn> |

📍 <https://www.linkedin.com/in/huynh-hau-602a91341>

🎯 CAREER OBJECTIVE

Software Engineer Intern with practical experience in full-stack web development and data engineering through school and personal projects. I have used Java, JavaScript, TypeScript, and Python in school and personal projects to build web applications and data pipelines. My goal is to become a strong Software Engineer while learning more about Data Engineering. I like solving hard problems and learning from challenges instead of giving up. In the long term, I want to work in a professional team where I can learn from senior developers, take on more responsibility, and build useful products.

🎓 EDUCATION

APTECH COMPUTER EDUCATION

08/2023 - 08/2026

Program: Advanced Diploma in Software Engineering (ADSE)

Grade: Distinction

UNIVERSITY OF TRANSPORTATION AND COMMUNICATIONS - HCMC (UTH)

09/2023 - 12/2026

Major: Data Science

Status: Final-year student (graduation phase)

📁 PROJECTS

CINEMA BOOKING SYSTEM

03/2026 - 05/2026

Role: Full-stack Developer | Team of 4

- Tech Stack:

+ Backend & API: Java Spring Boot, RESTful API

+ Database: MySQL

+ Frontend: Next.js

+ Tools: Git, Swagger, Jira

- **Target Users:** Customers, Admins, and Cinema Staff.

- **Project:** Multi-role cinema management and ticket booking system with **30+ features** for Customers, Admins, and Cinema Staff.

- My Contributions:

- Designed and built the backend architecture using Layered Architecture (MVC-based), creating a clear structure for the application.

- Developed RESTful APIs and business logic for movie management, movie reviews, showtimes, and ticket booking using Java Spring Boot and MySQL.

- Built frontend features with Next.js and connected them with backend APIs.

- Developed showtime and time-slot logic for Staff and Managers across cinema branches.

- Integrated OAuth 2.0 for user login and authentication.

- Designed and deployed the application on a self-hosted home server for testing.

- Used Jira to divide and track tasks, and Git for team development.

ROOMBEACON SYSTEM

06/2026 - Present

Role: Solo Developer

- Tech Stack:

- + Data & Processing: Python, Apache Airflow, Pandas
- + Database & Analytics: MySQL, DuckDB
- + Storage: MinIO (S3), Parquet
- + DevOps & Tools: Docker, Docker Compose, Git

- **Target Users:** Students, workers, and budget-conscious renters.

- Key Contributions & Results:

- Built an end-to-end data platform covering data ingestion, storage, validation, and analysis.
- Developed automated data pipelines using Python and Apache Airflow to collect, process, and manage rental market datasets.
- Collected and processed 100K+ rental records from 10+ sources with scheduled crawling, incremental updates, and historical tracking.
- Designed data storage architecture using MySQL for structured data, MinIO (S3) for image assets, and Parquet for analytical datasets.
- Performed data validation and exploratory data analysis (EDA) using Pandas and DuckDB to improve data quality and extract rental market insights.
- Prepared analytical datasets for future advanced analytics and machine learning applications.
- Developed backend RESTful APIs to serve processed rental data for search, filtering, and visualization.
- Deployed and managed the full infrastructure using Docker Compose on a self-hosted server with retry and error-handling mechanisms.

★ TECHNICAL SKILLS

■ **Backend & API:**

Java Spring Boot, NestJS, RESTful API

■ **Programming Languages::**

Java, JavaScript, TypeScript, Python, SQL

■ **Frontend:**

Next.js, React.js

■ **Database:**

MySQL, DuckDB

■ **AI & LLM:**

Coding assistance, code generation, debugging, technical research, and AI output review

👉 INTERESTS

- Improving English skills, communication, and response skills.
- Learning new technologies and expanding technical knowledge through real-world projects.
- Learning from experienced developers and mentors to improve software engineering skills.
- Improving task management and problem-solving skills through practical work.
- Taking on technical challenges and continuously improving through practice.
