

HUYNH HAU

Software Engineer

Ho Chi Minh City, Vietnam | +84 847027779 | haucoderfullstack05@gmail.com | www.codeser.io.vn

PROFILE

I have pursued a career in Software Engineering driven by a long-standing and intense passion for programming and technology. While I may not consider myself a natural-born algorithmic genius, I take immense pride in my high level of discipline and relentless persistence. Pursuing dual-track studies in Data Science at UTH and Software Engineering at Aptech stands as a testament to my perseverance and daily drive to ensure I never fall behind. I have built a solid foundation in API design, databases, authorization, payment processing, and media management. Currently, I am seeking an internship opportunity in a real-world environment where I can contribute my strong work ethic while further honing my technical skills and software engineering mindset.

EDUCATION

2023 - Present

University of Transport Ho Chi Minh City (UTH)

Major: Data Science

Focus: system thinking, data-oriented analysis, and software problem solving

2023 - Present

Aptech Computer Education

Program: Advanced Diploma in Software Engineering (ADSE)

Focus: practical software engineering, full-stack development, and project-based learning

SKILLS

Frontend: ReactJS, Next.js, TypeScript

Backend: NestJS, Spring Boot, Node.js

API Design: RESTful API, CRUD services Auth flows, RBAC

Databases: MySQL, SQL Server, MongoDB

Tools: Git, Docker, MinIO

UI & Docs: Material UI, Bootstrap, Tailwind CSS, Figma

PROJECTS

AI Mock Interview Platform - AI-Powered Interview Preparation System

Featured Startup Project

GitHub Repository: <https://github.com/HauCoder2005/ai-mocks-interview-projects>

Tech Stack: Next.js • NestJS • MinIO • Docker • Meta Llama 3

- Designed and developed an AI-powered interview preparation platform that helps students, interns, and junior developers evaluate interview readiness through realistic mock interview simulations.
- Conducted business analysis, actor analysis, requirement engineering, business rule definition, domain modeling, and MVP planning for the entire product lifecycle.
- Designed a scalable system architecture using Next.js, NestJS, MinIO Object Storage, Docker, and LLM integration.
- Implemented AI Mock Interview workflows that generate personalized interview sessions based on target position, experience level, programming language, framework, and focus topics.
- Built AI evaluation pipelines capable of analyzing candidate responses, generating interview scores, identifying strengths and weaknesses, and providing improvement recommendations.
- Integrated Meta Llama 3 for interview question generation, answer assessment, feedback generation, and learning guidance.
- Designed AI-powered CV Review and ATS-oriented CV Builder modules to help candidates improve resume quality before applying for jobs.
- Developed an IT Job Aggregator module for collecting, categorizing, filtering, and recommending technology-related job opportunities.
- Open-sourced the project during development for validation, learning, and portfolio purposes. The repository is planned to transition into a private commercial codebase after MVP completion and product validation.

Cinema Booking System - Multi-branch Ticketing Platform

Academic Project

- Built seat booking, showtime, and role-based authorization modules for admin, manager, and staff in a multi-branch cinema system.
- Worked on booking concurrency, API structure, database design, and operational workflows across frontend and backend development.
